

HARRY WARD | SOFTWARE DEVELOPER

- » **Speciality:** Full-Stack Web Development & Modern JavaScript Applications
- » **Tech Stack:** TypeScript, React, Next.js, Node.js, Prisma, tRPC, MongoDB, SQL, Python
- » **Portfolio:** harry-ward-portfolio.vercel.app
- » **Live Project:** lazuli-web.vercel.app
- » **GitHub:** github.com/harrywardy-cmd

»»» Professional Summary

Full-stack Graduate Software Developer with experience designing, developing, and deploying scalable web applications using React, Next.js, Node.js, and TypeScript. Strong foundation in REST API development, authentication systems, database architecture, and modern frontend engineering practices. Experienced supporting enterprise production systems within fast-paced environments while improving operational efficiency through automation and debugging workflows. Passionate about clean code, scalable software architecture, and building polished user-focused applications.

»»» Professional Experience

2024 – Present	IT Service Desk Analyst	Grill'd Support Office
» Resolve 80+ enterprise technical support tickets weekly across software, hardware, networking, and internal business systems supporting day-to-day operations across multiple teams. » Collaborate with Digital and Technology teams to troubleshoot production application issues, contributing to system stability and reduced downtime across internal platforms. » Automated recurring support workflows using scripting techniques, reducing manual operational workload by approximately 20% and improving response efficiency. » Support deployment, maintenance, and troubleshooting of enterprise systems in a high-volume environment with fast incident turnaround requirements.		

»»» Projects

2025	Lazuli E-Commerce Platform	React · Next.js · Node.js
» Designed and deployed a production-ready full-stack e-commerce platform featuring authentication, stock validation, responsive UI, and secure payment processing across 5+ core feature systems. » Implemented scalable frontend architecture using React, Next.js, and Zustand, supporting 20+ reusable UI components and consistent state management across the application. » Integrated Stripe payment workflows and webhook-based backend processing enabling secure, event-driven transaction handling and order lifecycle management. » Built reusable frontend components, REST API integrations, and modular architecture focused on scalability, maintainability, and performance optimisation across multiple application layers. » Deployed production application on Vercel with automated CI/CD workflows, enabling continuous deployment, fast iteration cycles, and reliable production hosting with zero-downtime updates.		
2026	Social Media / Community Platform	T3 Stack · TypeScript
» Developed a full-stack social media platform using the T3 Stack with TypeScript, Prisma, tRPC, and Next.js across authentication, feeds, profiles, and social graph functionality. » Implemented fully type-safe APIs using tRPC, improving maintainability and reducing frontend-backend integration errors through end-to-end typing. » Designed scalable relational database models using Prisma ORM supporting complex user relationships and content interactions.		

» Extended the platform beyond the tutorial foundation by adding custom features, UI improvements, and additional application functionality across multiple modules.

2025	MERN Stack CRUD Application	Full-Stack Web App
» Developed secure CRUD application with JWT authentication, role-based access control, protected routes, and RESTful API architecture spanning multiple endpoints and data operations. » Built modular Express.js backend systems with middleware validation and structured routing to support scalable API expansion. » Created responsive React frontend using React Router and Axios for seamless client-server communication across multiple user flows.		
2025	Python Snake Game	Python
» Developed desktop Snake game using object-oriented programming principles with structured gameplay architecture and modular game loop design. » Implemented collision detection, rendering systems, and state management supporting smooth gameplay mechanics and maintainable code structure.		
2024	Algorithms & Data Structures Practice	LeetCode
» Solved 60+ algorithm and data structure problems focused on arrays, recursion, linked lists, sorting, and complexity optimisation. » Strengthened analytical thinking, debugging capability, and software problem-solving skills through practical implementation exercises.		

»»» Education		
2021 – 2024	Bachelor of Computer Science	Swinburne University
» Major: Software Development » Minor: Games & Interactivity » Relevant Coursework: Advanced Web Development, Cloud Computing Architecture, Introduction to Artificial Intelligence, Software Testing and Reliability, Creating Secure and Scalable Software, Data Structures and Patterns
